

INTERACTIVE DATA DASHBOARD

Paytm / UPI Merchant MDR Analytics

Explore transaction value, the ₹2,000 threshold, estimated MDR, categories and monthly trends.

Important: 0.4% here refers to the specified Merchant Discount Rate (MDR) framework, not a government tax. The calculation below is an analytical estimate.

OVERVIEW

 Transaction Value

₹196,400

 Transactions

10

 Above ₹2,000

8

↑ 80.0% of filtered transactions

 Estimated MDR

₹712

All KPI cards update automatically when you change the sidebar filters.

Merchant Payment Visual

The image is illustrative; the dashboard calculations come from the uploaded/sample transaction data.

MDR Framework

0.4% MDR: specified P2M merchant transactions above ₹2,000.

₹2,000 or below: remains free under the stated framework.

₹75,000+: the 0.4% category has a ₹300 per-transaction cap.

Important: MDR is not a government tax collected by the Government or NPCI.

How to read this dashboard

Use the filters to narrow the dataset. Every KPI, chart and table below recalculates from the filtered rows.

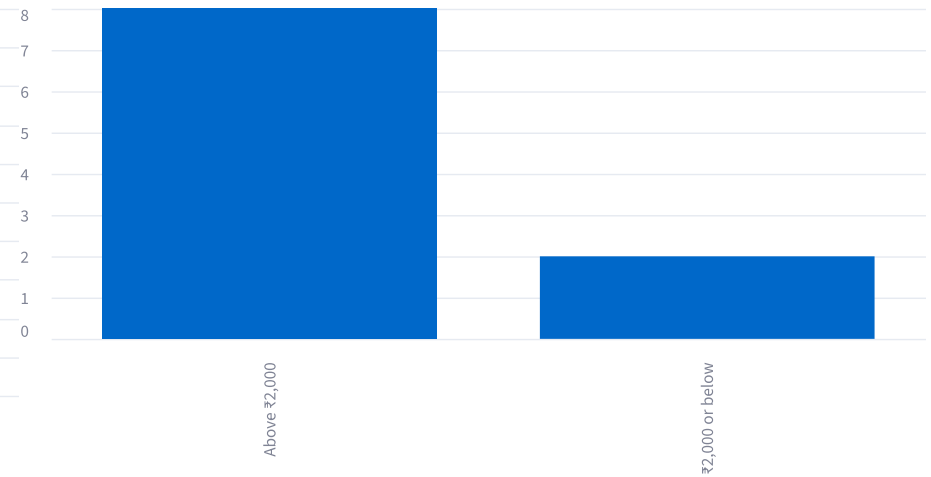

Understand the Transactions

1. Monthly transaction value

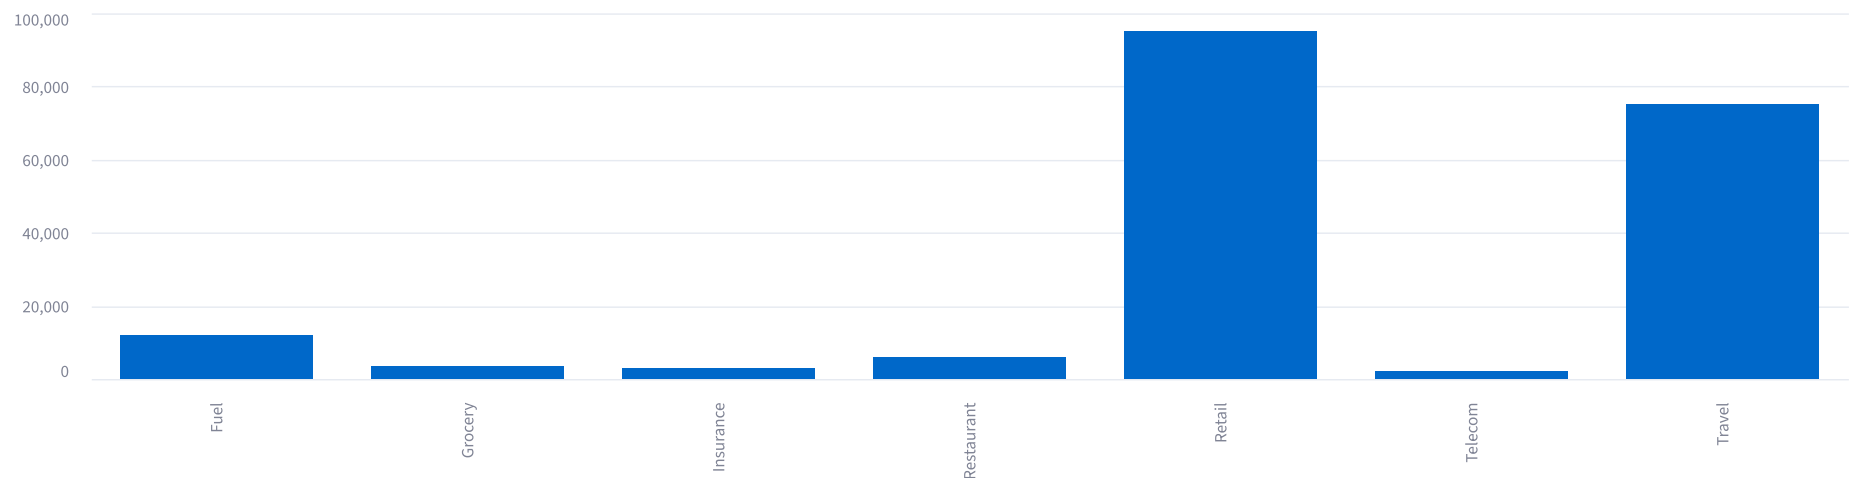

What this chart tells you: It compares the total money value of transactions in each month. A taller bar means more transaction value was processed during that month. Use it to spot high-activity and low-activity periods.

2. Transactions by ₹2,000 threshold

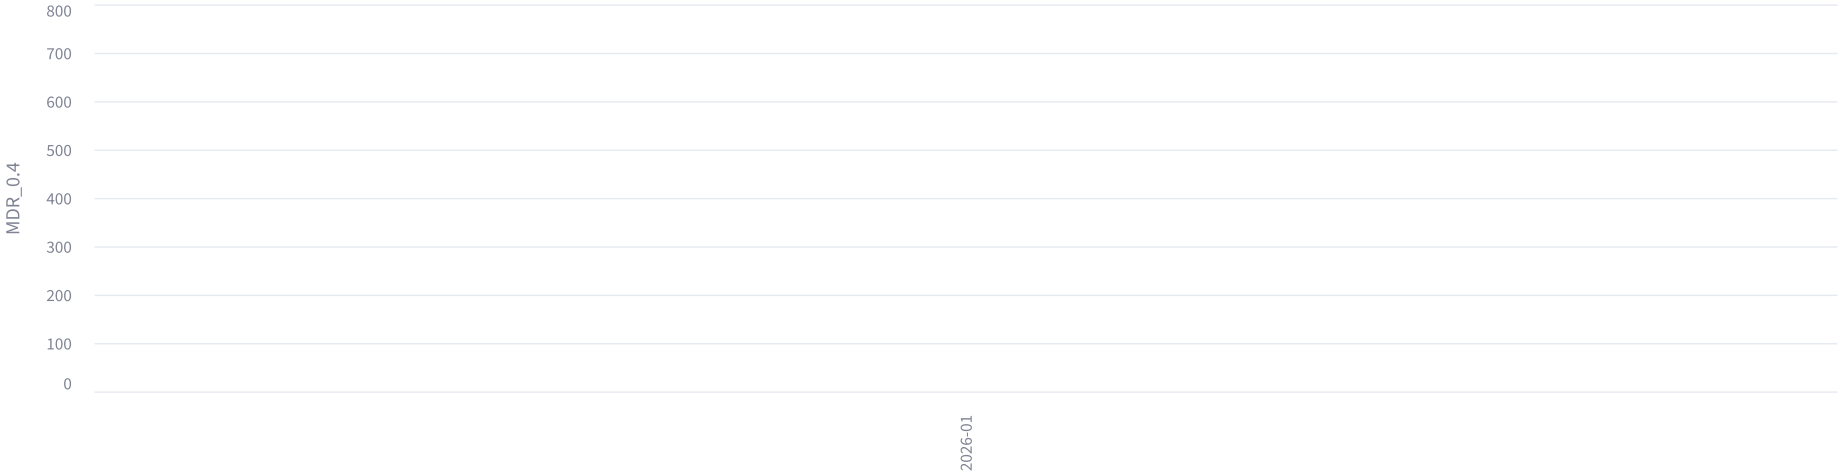

What this chart tells you: It counts transactions on either side of the ₹2,000 threshold. This helps you see how many filtered transactions fall into the group used by the dashboard's 0.4% MDR estimate.

3. Transaction value by category

What this chart tells you: Each bar represents the total transaction value for a merchant category. Longer bars indicate categories contributing more transaction value in the current filtered dataset. This is a value comparison, not a profitability ranking.

4. Estimated MDR by month

What this chart tells you: This line shows the dashboard's estimated MDR amount over time. Peaks mean the filtered transactions generated a higher estimated MDR amount under the calculation used here.

Transaction-Level Details

How to use the table: Search, sort and inspect individual transactions. **Eligible_0.4_MDR = True** means the transaction is above ₹2,000. **MDR_0.4** shows the dashboard's estimated MDR for that row.

Transaction_ID	Date	Category	Amount	Payment_App	Type	Eligible_0.4_MDR	MDR_0.4
